

FEATHER RIVER RAIL SOCIETY – AGENDA REPORT

DATE: May 30, 2013
FROM: Gail McClure – Director
ITEM: Acquisition of Equipment
SUBJECT: Single piston diesel injector test bed

We have been contacted by a diesel repair business in Bellingham, WA regarding donation of a single piston diesel injector test bed designed specifically for big diesel engines including Alco and EMD Coast Guard boats (same as locomotive diesels). They are willing to store this piece of equipment through the summer and will provide loading services at origin. This is a very expensive, albeit old, piece of equipment reportedly in working condition.

I have obtained pictures and measurements. President McClure has spoken with Dave McClain regarding the test bed and he advised, "It's worth its weight in gold."

Pictures and footprint diagram available for review.

The donor has advised we would be able to tow it with the Dodge on a car trailer. Cost to move would include gas, lodging, meals and trailer rental not to exceed \$1,500.

Action: Motion to proceed with procurement of proposed donated equipment, not to exceed \$1,500 expense, to be funded from line item TBD.

Respectfully submitted,

Gail A. McClure, Director
